Our Service Portfolio Supports Your Leveling Machine and Coil Processing Line in All Phases

The name **SCHNUTZ** stands for premium leveling machines. Developing, engineering, and manufacturing these machines has been our business since 1882. At our Siegen site, SCHNUTZ GmbH has built expertise that is arguably unrivaled anywhere in the world.

As part of the **b+s group**, we can also team up with our parent company **BURGHARDT+SCHMIDT** to deliver complete coil processing lines.

Put our expertise to work for your benefit and extend the service life of your equipment!

Training, Seminars, and Customized Consulting

Every machine comes backed by comprehensive services. Even before you make an investment decision, our specialists are available to provide consulting support. After all, selecting the right technology for your specific product mix is what ensures your investment pays off. We get your team ready to operate the machine or coil processing line by holding targeted training sessions and seminars. Your requirements set the framework. We hold training sessions at our technical center or on-site. Whatever the format, we always make sure to allocate plenty of time to hands-on training alongside the necessary theory.

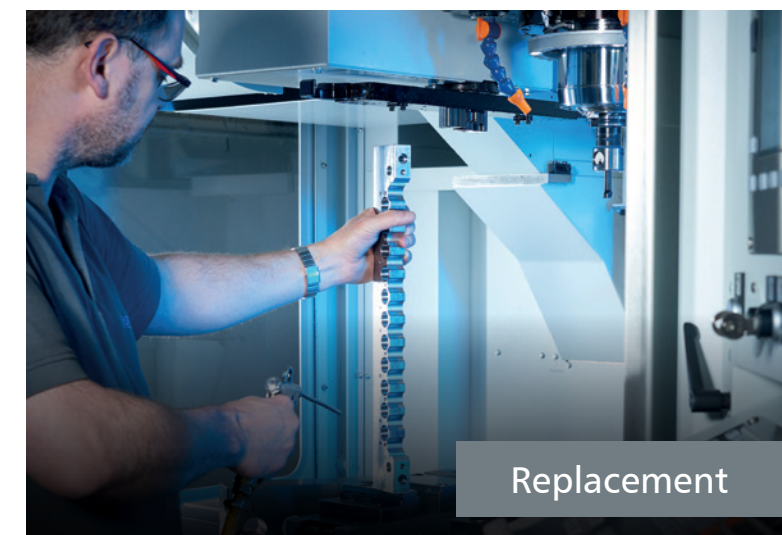

Education

- Neben der Planheit, ist der Restspannungszustand ein wichtiges Qualitätsmerkmal.
- Ein planes Blech mit hohen Restspannungen kann nach der Weiterverarbeitung (z.B. Schneiden) wieder Planheitsfehler aufweisen.

Spare Parts Delivery

Because our machines are built to last and typically remain in use for decades, we ensure a continuous supply of spare and wear parts. We provide aftermarket support throughout the entire machine lifecycle. To make this possible, we maintain our own well-equipped manufacturing facility, enabling us to respond quickly and flexibly to your requirements.

Replacement

Roll Set Regrinding and Complete Leveling Cassette Overhaul

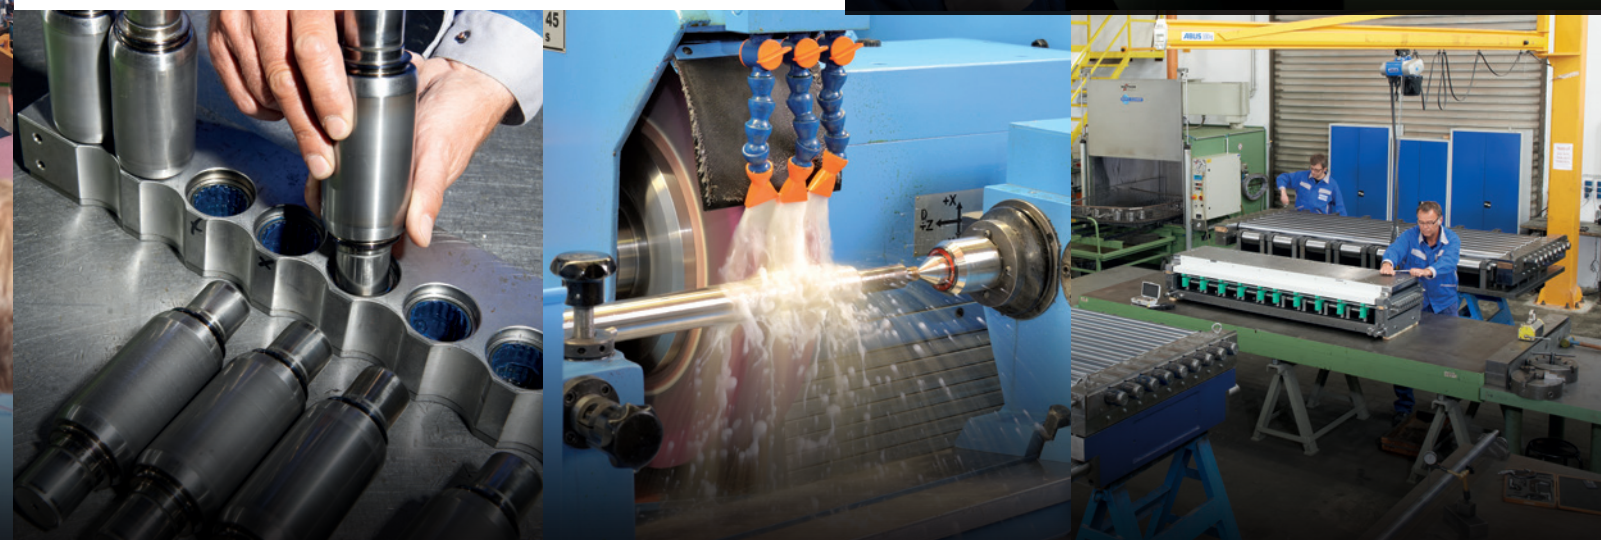

The focus here is primarily on the roll sets – the actual working tools of the leveling machine. Along with their bearings, they are subject to wear. Contamination of the rolls and cassettes is also unavoidable. After conducting a condition analysis, we overhaul the roll sets – and even complete cassettes. We only replace what truly needs replacing. This approach is sustainable and boosts cost-effectiveness for you.

We keep customer-specific spare parts in stock in this location, ensuring “fresh” rolls are always on hand for immediate installation. The worn rolls are then subsequently refurbished and returned to the consignment stock.

To make this maintenance process even more straightforward and swifter, we also offer customized consignment stock arrangements.

Renew

Machine Installation and Inspection

Preventive maintenance by our specialists on-site is also part of the services we offer. This keeps your line's productivity consistently high.

Complete Leveling Machine Overhaul and Automation Upgrades

When it's time for a complete machine overhaul, our team is ready to handle it. At our Siegen facility, we can completely dismantle and overhaul your machine, and restore it to like-new condition, according to your specifications.

It is also essential to balance the longevity of mechanical components with the rapid evolution of electronic components. To address this, we offer customized control system updates for your leveling machines or lines, keeping their automation technology state-of-the-art at all times.

The SCHNUTZ Team Is Happy to Help.
